

Same trajectories as AED_ow1_vs_shi2024_within_cultivar_comparison.pdf, z-scored against each test's own null raw-vs-null-level Spearman rho=0.985 (n=36) -- raw AggrDiv magnitude is mostly noise-floor, not biology. Note how much flatter/more compressed this is than the raw-magnitude version -- that compression IS the finding.

Ordinal position since own baseline (own study: 1=6hpi,2=24hpi | Shi2024: 1=T1/DEV02...6=T6/DEV11 ; cross-cultivar x=actual valid
